# DIGITAL METRO NORTH

# Using myVPN

myVPN can be used on a Queensland Health Device to access network drives and applications whilst offsite.

Important: Checkpoint Endpoint Security Client must be installed on your Queensland Health laptop and you need to have registered for an RSA PIN.

### Signing into myVPN

- 1. Open Checkpoint Endpoint Security Client.
- 2. In *Checkpoint Endpoint Security Client* enter into the following fields:
  - a. Username: Enter your Novell ID.
  - b. Tokencode: Enter your RSA PIN.

🔂 TrGUI		_

5. *Checkpoint Endpoint Security Client* is available in the system tray as a yellow padlock.

6. You have now successfully signed into myVPN from your device.

#### Accessing network drives

After signing in with *Checkpoint Endpoint Security Client* you will need to log into *Client for Open Enterprise Server (OES)* to access network drives. If you lose access to your Queensland Health drives you will need to log into *OES again*.

1. Open OES from your service tray. This is located at the bottom right of your screen near your network and sound settings.

^	۳Ð	臣	¢×	7:35 AM 27/03/2020	3	

2. Right-click on the OES icon in the system tray.

3. Select OES Login.

4. Enter your Novell username.

Username:	I			
Password:				
Did you forge	at your password?			
Did you forge eDirectory Tree:	et your password? Script		Traes	
Did you forge eDirectory Tree: Context:	et your password? Script	v	Trees Contexts	

#### Note: The eDirectory tree and context should automatically populate.

5. Enter your password and select **OK**, after a few moments your network drives should be visable.

Client f	or Open Enterprise Server Login	×
