## Herston Health Precinct Symposium

The 2023 Herston Health Precinct Symposium was held from Monday 4th September to Thursday 7th September at the RBWH Education Centre. Over the four-day event the program covered topics from digital health, advances in models of disease, advances in cardiovascular health, the growing challenge of obesity and the future of cancer care in Queensland. Innovation was examined across the whole of the healthcare journey, from the roots of ill health in childhood to the use of new technology to adapt and recover from illness in later life. A debate was also held on how our healthcare system, and its focus on hospital beds, needs to be reconfigured for the needs of the future.

#### **Highlights Included:**

Keynote sessions covering topics such as,

- Superbug Solutions
- Novel MRI observations of brainstem function in Health and Diseases marked by fatigue
- Lessons learnt from the MRFF cardiovascular mission
- The Australian child maltreatment study

Special presentations were held by Professor Nicole Marsh discussing the development and implementation of the cancer nurse's society Australian guidelines. A consumer engagement workshop was held on the Wednesday which included ceasing the day with a consumer and community networking event.

This year a total of 131 abstracts were submitted, 55 of which were selected for oral presentations during the event. These submissions competed for a number of awards and our 2023 winners are:

• Dr Stephen Morrison Award for Best Clinical Research

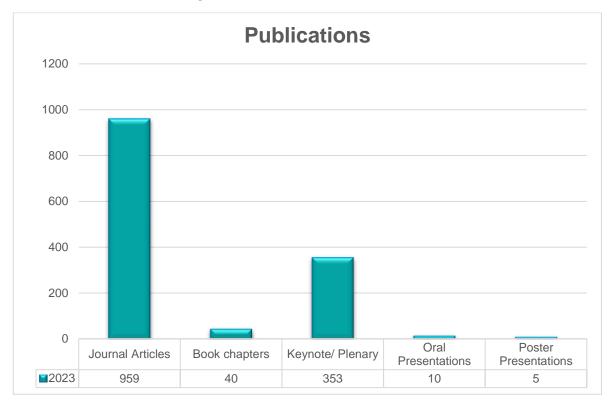

Nicole Marsh, 'Securing Central lines in Intensive Care: A multicentre randomised controlled trial (RCT)'

- Professor Lawrie Powell AC Early Career Research Award
  Nicholas Green 'Optimisation of a Semi-Automated Custom HTO Surgical Guide'
- Professor Jeffrey Lipman AM for Best Translational Research Into Practice Award
  Bree-Yana McConnochie, 'Enteral Probiotics for the Prevention of Ventilator Associated Pneumonia in Mechanically Ventilated, Adult ICU Patients'
- Professor William Egerton Award for Best Discovery and Innovation Research Shashwat Mishra, 'Automation of the 3D modelling and corrective anatomical measurements workflow in Lower Limb Malalignment'

We would like to take this opportunity to thank all those involved in bringing together this year's Symposium – without their efforts this event would not have been possible. Thank you also to all those who made an effort to attend, either in person or virtually.

# **RBWH Research Output**

# The Centre for Palliative Care Research and Education

Professor Patsy Yates Director Centre for Palliative Care Research and Education

The primary role of the Centre for Palliative Care Research and Education (CPCRE) is to enhance palliative care services in Queensland through research and education endeavours. To achieve these aims, CPCRE operates as a 'centre without walls', committed to building and fostering partnerships with the palliative care community in its endeavours.

#### Highlights of 2023:

Medicinal Cannabis research program update. Prof Janet Hardy and colleagues continue to run a medicinal cannabis research program involving 4 metropolitan hospitals in South East Queensland: Royal Brisbane and Women's Hospital, Princess Alexandra Hospital, St Vincent's Private Hospital Brisbane and the Mater Adult Hospitals. The first trial of cannabidiol (CBD) oil vs placebo showed that CBD does not provide any extra symptom benefit over and above that provided by palliative care alone (Journal of Clinical Oncology, Nov 2022). The results of this trial have been disseminated widely and have triggered international interest. The second trial of a 1:1 CBD/THC product versus placebo has been completed and the data is being analysed. In a third study of a 1:20 THC/CBD product we will work with Telehealth Research to offer trial participation to rural and remote areas of Queensland.

CPCRE staff have continued collaborative research projects in 2023. Research projects are multi-disciplinary and are across institutions (within Queensland and across Australia), and results have been published in national and international peer reviewed publications. CPCRE staff hold appointments on state, national and international Palliative Care/Oncological & Nursing and Medical advisory boards/reference groups.

CPCRE education activities include: the General Practice Palliative Care Education Program; the Program of Experience in the Palliative Approach; the Evidence Based Palliative Care Strategy; the Queensland Palliative Care Research Group & Workforce Development Programs. The Centre disseminates palliative care education and research information to health professionals via: the CPCRE Website, CPCRE Newsletter (quarterly), CPCRE Calendar (biannually), CPCRE E-Bulletins (bimonthly), the Annual Research Conference & the Annual Update Symposium (topic rotates 3 yearly between general medicine, oncology and supportive care); the Master Class Series and the Annual Nurse Practitioner Symposium.

#### Benefits for clinical practice:

The Centre's work focuses on:

- Developing the capacity of the palliative care workforce to provide quality palliative care
- Improving the links between research and practice in palliative care
- · Promoting palliative care research to inform care and support novice researchers in the sector
- Providing information which supports the delivery of palliative care services

# Successful PhD candidates in 2023

| Name              | PhD Title                                                                                                                                                                     | Month<br>Competed | Affiliated<br>University                                   | Summary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

# Herston Imaging Research Facility (HIRF)

## **Research Highlights**

Herston Imaging Research Facility (HIRF) is a research focused service, continuing to provide state-of-the-art infrastructure in MRI, PET/CT and PET/MR and in 2023 3D surface and ultrasound imaging was added to the portfolio. It provides technical support on imaging protocols and analysis and research support for ethics and governance.

In 2023 the staff of HIRF brainstormed a rethink of the strategy. In addition to working as a team, as an alliance of RBWH, The University of Queensland and Queensland University of Technology, our vision needed to reflect that of our partners. With input from academic, allied health and management streams we developed a strategic vision "Innovative Translational Research in Healthcare" with the purpose "To provide cutting edge imaging technologies and expertise, to support meaningful reform in health care delivery".

This reflected our mission to be a research imaging capability connected to clinical needs at RBWH. HIRF does not compete with the image science capabilities on the university campuses, nor does HIRF compete with the clinical imaging departments in the hospital. Much activity in 2023 was directed to outreach to the RBWH community. HIRF is committed to:

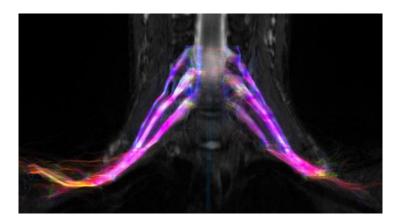

- i) implementing innovative and emerging imaging technologies to address unanswered clinical questions,
- ii) supporting clinical trials so that RBWH patients don't miss out on novel therapies
- iii) being a conduit between basic research at our universities and real-world clinical questions

HIRF supports many RBWH-led and collaborative studies. One project, a collaboration between breast surgeons at RBWH, the Herston Biofabrication Institute and industry partners, is a clinical trial to evaluate medical-grade breast scaffold implants with autologous fat grafting for breast restoration surgery. In collaboration with the Jameison Trauma Institute, advanced imaging was applied to identify the denervation of the brachial plexus. The HIRF team developed a protocol to better visualise optic nerve compression in base-of-skull tumours. Another project, led by RBWH clinicians, evaluated patient-specific applicators for brachytherapy treatments. The 3D surface imaging system, the VECTRA, was Investigated for its utility in follow up of extracorporeal photopheresis (ECP) in cutaneous T cell lymphoma (CTCL) patients. The high-resolution MRI was used to evaluate perineural spread in head and neck cancers.

HIRF provides imaging to support a range of clinical trials. In 2023, HIRF supported trials investigating new treatments for diseases such as mantle cell and high-grade B cell lymphoma, lymphocytic leukemia, hemophilia B, multiple sclerosis, thyroid cancer, Alzhiemer's disease, myelofibrosis, chronic sinusitis, emphysema, and prostate cancer. Trials, investigating new diagnostic tools to further evaluate clinical pathways were conducted in inclusion body myositis, breast cancer, prostate cancer, epilepsy, head and neck cancers, urological cancer, Hodgkin lymphoma, traumatic brain injury and radiotherapy treatments.

The user base includes a wide range of researchers, with over 62 studies in 2023, resulting in 69 papers in high impact journals such as Neuron, Lancet Oncology and the British Medical Journal. HIRF also has a mission to support the development of the next generation of clinical researchers, through activities at the HDR, undergraduate and secondary high school levels.

## Successful PhD candidates in 2023

# Jamieson Trauma institute (JTI)

Professor Michael Schuetz Director Jamieson Trauma Institute

JTI Team

The Jamieson Trauma Institute (JTI) has had another successful year and achieved significant milestones as detailed in this report. Notably, we signed new 5-year agreements with our partners Metro North Health, the Motor Accident Insurance Commission and Queensland University of Technology, whose continued investment reflects JTI's strong performance and alignment with their partners strategic goals. JTI plays a role in advancing system capability, quality improvement, knowledge translation, financial sustainability, data and epidemiology, and research programs in trauma systems. JTI is thus making contributions to the physical and mental health of Queenslanders through research areas such as data analytics, use of advanced imaging, innovative rehabilitation, epidemiology, injury prevention, and biomedical engineering.

As we reach maturity, JTI's research activities, including those of the Queensland Injury Surveillance Unit, have expanded with major new initiatives in mental health after trauma and rehabilitation engineering. We currently have over 80 staff, students and affiliated members. The institute's activities are arranged in eight Themes (Data Quality and Analytics, Injury Prevention, Clinical Trials, Diagnostics and Innovations, Education and Training, Augmented Reality and Virtual Reality in Trauma Care, Rehabilitation and Outcome Measurement, and Quality of Care and Processes). In 2023, JTI published 73 papers in high-quality research journals and delivered 72 presentations, and several researchers received prizes and awards during the year. JTI co-hosted several events including the "Surgery, Orthopaedic Trauma and Burns Infection Management Workshop", the "Annual Kenneth Jamieson Lecture", and the "Royal Australian College of Surgeons Trauma Symposium: E-mobility – Current Perspectives and Future Directions".

JTI researchers were key players in the launch of a successful new module on acute compartment syndrome as part of the Queensland Trauma Education program, which provides multidisciplinary trauma care education and resources (<u>https://csds.qld.edu.au/qte/</u>). Our staff held leadership roles at international conferences such as Rehab Week 2023 (Singapore) and Trauma 2023 (Melbourne). Findings on e-Mobility injury trends and patterns continue to shape policy and public opinion with over 20 media appearances, several data requests to Queensland and interstate government agencies, and the drafting of the "Emobility Position Paper" of the Royal Australasian College of Surgeons and the Australasian Injury Prevention Network. Participation in state, national and international committees related to trauma and injury has expanded this year, and JTI representatives are involved in shaping the future of trauma systems.

In summary, JTI has achieved remarkable milestones this year, thanks to our dedicated team. Our strategic partnerships and commitment to research continue to drive progress in trauma systems, benefiting the physical and mental health of Queenslanders. JTI remains at the forefront of innovation, fostering collaboration and contributing to cutting-edge advancements in trauma care. Exciting possibilities await as we explore new avenues in augmented reality and remote care for injured Queenslanders who live in regional and rural areas of our state.

## Successful PhD candidates in 2023

| Name                 | PhD Title                                                                                                                                                                                                  | Month<br>Competed | Affiliated<br>University                  | Summary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|-------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Dr. Andrew<br>Foster |                                                                                                                                                                                                            |                   | Queensland<br>University of<br>Technology | The development of fracture-related infection (FRI) is a devastating complication in orthopaedic trauma surgery. Treatment requires multidisciplinary input often involving further surgical procedures and prolonged antibiotic therapy. Original research within this thesis includes the first population-based epidemiological and health economic analysis of FRI performed worldwide. These                                                                                                                                                                                                                                                                                             |
|                      |                                                                                                                                                                                                            |                   |                                           | findings demonstrate enormous upside potential to<br>improving current prevention and treatment methods.<br>One potential method of doing so is through improving<br>the delivery of local antibiotic therapy. A novel antibiotic-<br>loaded hydrogel is investigated within a series of large<br>animal models, which demonstrated superiority in<br>prevention and treatment of FRI over currently available<br>clinical treatments.                                                                                                                                                                                                                                                        |
| Dr. David<br>Sparks  | Convergence of scaffold-<br>guided bone regeneration<br>principles and<br>reconstructive surgery: A<br>regenerative matching<br>axial vascularisation<br>approach to the load-<br>bearing long bone defect | April 2023        | Queensland<br>University of<br>Technology | Functional reconstruction of large volume bone loss in<br>the limbs is demanding. Reconstructive approaches<br>available have variable success and novel approaches,<br>such as those incorporating tissue engineering methods,<br>are required. The thesis describes and evaluates the<br>rare bench-to-bedside translation of a novel tissue<br>engineering technique, termed Regenerative Matching<br>Axial Vascularisation (RMAV), to reconstruct major bone<br>loss in the load-bearing limb where contemporary<br>surgical options are limited. The work described takes<br>the marriage between scaffold-guided tissue<br>regeneration and modern surgical practice to new<br>heights. |

| 6/04/2023     | Lipman J. Optimizing antibiotic pharmacokinetic/pharmacodynamics for Gram-negative infections in critically ill patients. (Invited speaker). National Congress of Vietnam Association of Emergency, Intensive Care Medicine and Clinical Toxicology, Virtual. Vietnam                                                                                                                                   |  |
| 20/04/2023    | <b>Melendez-Calderon A</b> . Assessing movement after neuromuscular impairments: opportunities of using open-<br>source wearables and RADAR-Base. (Invited speaker). RADAR-base Mobile Health Symposium 2023. Utrecht,<br>Netherlands                                                                                                                                                                   |  |
| 23/05/2023    | <b>Barker R.</b> Safe sleep environment through product safety and regulation of infant products. (Invited Speaker).<br>Australian and New Zealand Child Death Review and Prevention Group Conference, Virtual                                                                                                                                                                                          |  |
| 23/05/2023    | <b>Vallmuur K.</b> Insights from linked injury data to improve understanding and prevention of child deaths. (Invited Speaker). Australian and New Zealand Child Death Review and Prevention Group Conference, Virtual                                                                                                                                                                                  |  |
| 26/05/2023    | <b>Peters N, Williamson F, Richard C.</b> Low-level versus high-level disinfection of ultrasound transducers after standardised contamination on skin: A non-inferiority randomised controlled trial. ULTIMO. 29th Annual International Conference of the Australasian Sonographers Association. Brisbane. 2023 Gilbert Brown Prize winner for the best contribution to the free research paper session |  |
| 14/07/2023    | <b>Cramb S</b> . The Truth about Academia. (Keynote speaker). 4 <sup>th</sup> Annual Impact Markers Conference. Brisbane                                                                                                                                                                                                                                                                                |  |
| 5/09/2023     | <b>Vallmuur K</b> . Overview of the QLD Compensation Linkage and Injury Management Study. (Invited Speaker).<br>Healthy Working Lives Injury and Disability Insurance Data Interest Group, Monash University. Virtual                                                                                                                                                                                   |  |
| 24-28/09/2023 | Meléndez-Calderón A. (Program co-chair). International Conference on Rehabilitation Robotics (ICORR).<br>RehabWeek 2023. Singapore                                                                                                                                                                                                                                                                      |  |
| 24/09/2023    | <b>Meléndez-Calderón A.</b> Robot-assisted gait measures and their relationship with individual walking ability. (Invited Speaker). International Consortium on Rehabilitation Technology (ICRT). RehabWeek 2023. Singapore                                                                                                                                                                             |  |
| 6/10/ 2023    | <b>Barlas P</b> . Acupuncture in the time of Covid 19 and beyond: challenges, threats & opportunities. (Invited speaker). IGNITE Australian Physiotherapy Association Conference. Brisbane                                                                                                                                                                                                              |  |
| 12-15/10/2023 | Schuetz M, Vallmuur K. (Scientific Committee Members). Trauma 2023 Conference. Melbourne                                                                                                                                                                                                                                                                                                                |  |
| 13/10/2023    | <b>Pollard C</b> . Epidemiology of Trauma in Australia and New Zealand: now and into the future. (Keynote speaker). Trauma 2023 Conference. Melbourne                                                                                                                                                                                                                                                   |  |
| 14/10/2023    | Vallmuur K. The Future of Injury Prevention. (Session Chair). Trauma 2023 Conference. Melbourne                                                                                                                                                                                                                                                                                                         |  |
| 20/10/2023    | <b>Schuetz M</b> . Case 1: A 74-year-old female is not able to walk after hip fracture treatment. How can we revise it? (Panel member). 45th Annual Meeting of Royal College of Orthopaedic Surgeons of Thailand and the 43rd Annual Meeting of ASEAN Orthopaedic Association. Pattaya, Thailand                                                                                                        |  |
| 20/10/2023    | <b>Schuetz M.</b> Current Concepts in the treatment of Fracture Related Infections. (Invited Speaker). 45th Annual Meeting of Royal College of Orthopaedic Surgeons of Thailand and the 43rd Annual Meeting of ASEAN Orthopaedic Association. Pattaya, Thailand                                                                                                                                         |  |
| 22/10/2023    | <b>Schuetz M.</b> The ingredients to improve orthopaedic clinical care through translational research in Australia. (Invited speaker). 45th Annual Meeting of Royal College of Orthopaedic Surgeons of Thailand and the 43rd Annual Meeting of ASEAN Orthopaedic Association. Pattaya, Thailand                                                                                                         |  |
| 27/10/2023    | <b>Melendez-Calderon A</b> . Advances in Neurophysiology and Neural Rehabilitation Engineering of Movement. (Invited speaker). 11th Aalborg Symposium. India                                                                                                                                                                                                                                            |  |
| 3/11/2023     | <b>Vallmuur K</b> . Reconstructing the orthopaedic patient journey through data: Current and future opportunities. (Keynote speaker). Princess Alexandra Hospital Orthopaedic Research Showcase. Brisbane                                                                                                                                                                                               |  |
| 14/11/2023    | Vallmuur K. A scheme for the future? (Plenary speaker). Injury and Disability Schemes Seminar 2023. Hobart                                                                                                                                                                                                                                                                                              |  |
| 16/11/2023    | <b>Foster A</b> . Fracture related infection: a 10-year population based epidemiological and health economic study. 2023 AOA Annual Scientific Meeting. Melbourne                                                                                                                                                                                                                                       |  |
|               | QLD Best State Paper                                                                                                                                                                                                                                                                                                                                                                                    |  |
| 17/11/2023    | <b>Vallmuur K</b> . Injury Statistics, risk factors and patterns. 2023 Trauma Symposium: e-Mobility – current perspectives and future directions/ (Invited speaker). Royal Australasian College of Surgeons. Brisbane                                                                                                                                                                                   |  |
