Common challenges in primary care education series
Cancer genetics for GPs
Tuesday 19 February 2019

Join us for an education evening exploring common problems seen in general practice involving genetics.

This is the second of two education evenings exploring common problems seen in general practice involving genetics. This session will focus on cancer genetics and how GPs may identify suitable patients for referral and understand how to supply suitable advice if referral is not necessary. There will be opportunities to network with a local clinical geneticist and to ask specific or case related questions—bring these questions with you to the meeting.

Each session will provide a basic primer on genetics and discuss specific topics as listed in the program below.

Program	
6:00 pm - 6:30 pm	**Dinner and networking**
6:30 pm - 6:45 pm	**Welcome and GPLO update** *Dr Mike Hamilton GPLO Brisbane North PHN & Metro North HHS*
6:45 pm - 8:15 pm	**Cancer genetics for GPs** *Speaker Dr Helen Marfan – Consultant Clinical Geneticist, Queensland Genetic Health* • **Basic genetics (101)** • **Cancer genetics for GPs:** modes of inheritance, the role of genes in cancer development, somatic vs germline vs mosaic mutations, breast cancer, colorectal cancer, assessing risk on the basis of family history, potential outcomes of genetic testing, diagnostic vs predictive gene testing, panel testing, direct to consumer testing, genetic testing in children.
