

Virtual Visits – FaceTime

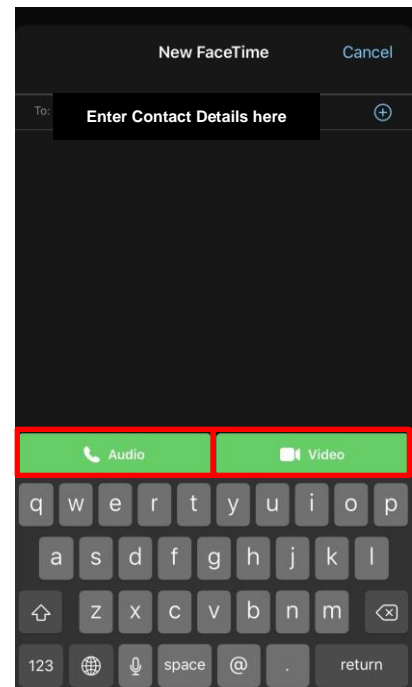

With visitor restrictions currently in place we want to ensure we can keep you safe and in touch with your family and friends. FaceTime is an application that enables you to make video and audio calls between Apple devices.

1. Firstly, make sure *FaceTime* is enabled on your device. Go to **Settings** in your Apple Device and find *FaceTime*, enable *FaceTime*.
2. Make sure your device is registered for *FaceTime* use:
 - a. For iPhone, your device will automatically use your mobile number.
 - b. For iPad and iPod touch, register your AppleID and sign in.
3. Once the device is enabled and registered, exit settings in the *FaceTime* app. Tap the '+' button and type the person's phone number or email address.

4. If you have the person's phone number or email address saved in your Contacts, you can start typing their name and select the name when it appears. Then tap **Audio** or **Video**.

Note: You can start a FaceTime video call from your iPhone during a phone call. Select the FaceTime icon in the Phone app to switch to FaceTime.

5. To end the call, select the 'red cross' button at the bottom.
